(Image credit: Google) Chrome dark mode is about to get an overhaul that could make it one of the best of the many apps now adopting the new dark mode option. While all of the best web browsers (opens in new tab) offer a dark mode for every website you browse, Google is going for something different courtesy of its latest Android update. The plan? The ability to implement different settings for different sites rather than treating all websites the same. It's a work in progress right now via the Canary build of Chrome but it sounds promising. Users can enable the option flag `chrome://flags` and then be able to configure auto-dark options by visiting the settings for individual pages. In theory, it should make it ideal for those websites we have all come across that dark mode simply turns into a disaster of a place to look at. It should also provide a far more personal experience when browsing websites so your favorite smartphone (opens in new tab) feels truly like yours thanks to a plethora of tweaking options. Sounds great, right? Don't get too excited yet. The flag exists but it hasn't been implemented fully by Google as it doesn't do anything yet. However, it's clearly coming and we're hopeful it will make its way to iOS versions of Chrome as well as Android. There's no word yet on if it'll arrive for desktop but we can't see why not. Chrome in the wider world Dark modes on apps and operating systems are growing in popularity as more of us realize that staring at a bright screen in a dark room really isn't healthy for our eyes. More options are always good as demonstrated by how Windows 11's Light and Dark modes will also offer accompanying sounds (opens in new tab) to suit the time of day better. The idea of a dark mode that works for specific websites is a similarly appealing idea whether you're looking for a bit more personalization or if you're in need of more accessibility options. In recent times, Google Chrome has benefited from regular updates, both security and feature wise. One new feature, Side Search, is also available through a Canary build and promises to effectively embed a Google Search page with previous search results making it easier for you to find things and keeping you on the straight and narrow of not veering away from Google. Expect to see more incremental but useful updates coming soon. Dark Reader analyzes web pages and aims to reduce eyestrain while browsing the web. Dark Reader Dark Reader is an open-source MIT-licensed browser extension designed to analyze web pages. Dark Reader will generate a dark mode that aims to reduce the eyestrain of the user. Dark Reader is feature-rich and is customizable in many ways throughout the UI. Questions Most questions can be answered by reading the help page. If the help page doesn't answer your question, open up a new discussion. How to contribute Read more about contributing to Dark Reader in CONTRIBUTING.md. Building for use You can install the extension from a file. Install Node.js LTS. Download the source code (or check out from git). Open the terminal in the root folder and run: `npm install npm run build` This will create a `build/release/darkreader-chrome.zip` file for use in Firefox. Using Dark Reader for a website You can use Dark Reader to enable dark mode on your website! Install the package from NPM (`npm install darkreader`) or build from the source code (`npm run api`) or include the script via a CDN such as unpkg or jsDelivr then you can use the following code to control Dark Reader's API `DarkReader.enable({ brightness: 100, contrast: 90, sepia: 10 });` `DarkReader.disable();` // Enable when the system color scheme is dark. `DarkReader.auto({ brightness: 100, contrast: 90, sepia: 10 });` // Stop watching for the system color scheme. `DarkReader.auto(false);` // Get the generated CSS of Dark Reader returned as a string. `const CSS = await DarkReader.exportGeneratedCSS();` // Check if Dark Reader is enabled. `const isEnabled = DarkReader.isEnabled();` ... or if you are using ES modules `import { enable as enableDarkMode, disable as disableDarkMode, auto as followSystemColorScheme, exportGeneratedCSS as collectCSS, isEnabled as isDarkReaderEnabled } from 'darkreader'; enableDarkMode({ brightness: 100, contrast: 90, sepia: 10, }); disableDarkMode(); followSystemColorScheme(); const CSS = await collectCSS(); const isEnabled = isDarkReaderEnabled();` Be aware that `darkreader` will add the `chrome` object onto the `window` object. These are to stub certain functions that the code will use. They originate from the `webextension-api`. Site fixes Automatically syncing the site fixes to every Dark Reader user was disabled because the GitHub team does not allow using GitHub as a CDN. The storage of these files would be expensive, and making requests to other resources would look suspicious. Each new release of Dark Reader will include these changes. However, this can be enabled using the following steps: Click on the Dark Reader icon. Click on the Dev tools button (in the bottom-right corner). Click on the Preview new design button. Enable the Synchronize site fixes setting under Settings -> Manage Settings. To force a synchronization of the sites fixes (when the corresponding setting is enabled!), use the following steps: Click on the Dark Reader icon. Click on the Dev tools button (in the bottom-right corner). Click on the Reset button. This will remove any custom site fixes you may have. Contributors Thank you to all our contributors! Dark Reader exists thanks to you. Backers Thank you to all our generous backers! Support Dark Reader by becoming a backer. Sponsors Does your company use Dark Reader? Ask your manager or the marketing team if your company would be interested in supporting our project. Your support will allow the maintainers to dedicate more time to maintenance and creating new features for everyone. Also, your company's logo will show on GitHub. Who doesn't want a little extra exposure? Here's the info. Thank you to all our wonderful sponsors! Page 2 You can't perform that action at this time. You signed in with another tab or window. Dark Reader: Dark Mode Everywhere Help Blog Privacy Policy Install Dark Reader browser extension. Configure the dark theme: brightness, contrast and sepia. Enable for all websites or particular domains. Use the following official links: Dark Reader is an open source eye-care browser extension. It doesn't send user's data anywhere. Trusted by 5,000,000 users. Developed since 2014. Support us. Good luck! GitHub Twitter Contact Copyright © 2022 Dark Reader Ltd. All rights reserved. Struggling with the brightness or glare when using Google Docs or other websites? During the pandemic school closures, students are spending more time using technology to access and complete classroom assignments. Many students with low vision are sensitive to screen brightness; for some students, screen brightness will cause debilitating migraines. Inverting the color (white text on black background) or adjusting the brightness, and using filters are ways to reduce eye strain. While some devices have reverse contrast and other brightness/contrast settings, these settings may not be compatible with all websites. Google Docs and other Google Suite applications are not compatible with the built-in dark mode settings. A popular solution used by 5,000,000 people, is the free Dark Reader extension. Dark Reader does not show ads and does not send user's data anywhere. In the video below, TVJ Jessica demonstrates the need for the Dark Reader extension and how Dark Reader can be used to invert the color when using Google Docs. Dark Reader Commands Toggle all websites on/off. Option+Shift+D Select specific websites to use Dark Reader. Option+Shift+A Installing Dark Reader As always, be sure to go to the website for the official links to install Dark Reader. Dark Reader extensions are available for: Chrome (free) Safari (\$4.99) Firefox (free) Edge (free) Dark Reader also has an iOS app that works on all devices which support iOS 15. Note: If you already purchased the Safari Dark Reader for your Mac, there is no cost to install Dark Reader on your iOS devices. According to the Dark Mode website, there is currently an App Store bug that shows a cost of \$4.99 for the iOS Dark Reader; if you have already purchased Dark Reader for your Mac, when you proceed with the payment, you will see a message saying you have already paid. Keep in mind that Dark Reader is a free Chrome extension, so if you have a Mac, you can use Dark Reader on the Chrome web browser for free. By Diane Brauner This eye-care extension enables night mode creating dark themes for websites on the fly. Dark Reader inverts bright colors making them high contrast and easy to read at night. You can adjust brightness, contrast, sepia filter, dark mode, font settings and ignore-list. Dark Reader doesn't show ads and doesn't send user's data anywhere. It is fully open-source you install disable similar extensions. Enjoy watching! How can we automatically toggle Dark Mode at predetermined times? Background Every day, around 5 PM, I switch on the dark mode of the Dark Reader Chrome extension. I toggle it off again the next morning to get more bright light in the morning. As of now, I have remind myself everyday to hit the ++-shortcut that I have configured in Google Chrome (`chrome://extensions/shortcuts`): Dark Reader - Chrome (google.com) Dark Reader 가 Dark Reader chrome.google.com 1. Chrome 2. Chrome -> Dark Reader 3. Dark Reader * 가 4. Dark Reader (/) / (/) : : : : : . @ (,) . ~ ~ ~ 가 ()
